ACTIVE INGREDIENT:
Diflubenzuron* (CAS #35367-38-5).....0.02%
OTHER INGREDIENTS:99.98%
TOTAL100.000%
*Contains 90.8 mg Diflubenzuron per pound.

APPLICATION:

A nutritional supplement for equine containing diflubenzuron for continuous feeding during the fly season. Prevents the emergence of house flies and stable flies from manure of treated equine. Stops development of house fly and stable fly larvae in manure of treated equine. Contains diflubenzuron (a chitin synthesis inhibitor). Breaks the house fly and stable fly life cycles in equine. Prevents the formation of fly larvae's exoskeletons when they molt. Can be used as part of an integrated pest management program for equine.

FEEDING DIRECTIONS:

Provide this block as a free choice source of nutritional supplementation for your equine. When used as directed, this block will provide sufficient diflubenzuron to prevent fly emergence from the manure of treated equine. This product prevents the development of house flies and stable flies in the manure of treated equine. Existing adult flies will not be affected. Start feeding this product early in the spring before flies begin to appear and continue feeding throughout the summer and into the fall until cold weather restricts fly activity. Allow free choice to equine. Equine should consume an average of 0.15 mg of diflubenzuron per kg of animal body weight per day, to achieve control of house flies and stable flies. Equine should consume an average of 1.2 ounces of this product per 100 lbs of animal body weight per day, which is equivalent to 12 ounces per day for a 1,000 pound equine.
